Regrouper des applications dans un dossier. Sur iPad.

Touchez une app, maintenez le doigt dessus puis faites-la glisser sur une autre app que vous voulez regrouper dans le même dossier, puis levez le doigt.

A screenshot of an iPad home screen. The background is a photograph of a busy city square with historic buildings. Several app icons are visible: Marmite, Yuka, Localiser, Mes amis, Plans, Google Maps, and Google Earth. A white arrow points from the 'Mes amis' icon to the 'Localiser' icon, indicating the process of grouping apps. At the bottom of the screen is the dock with various utility and social media icons. The entire content is framed by a dark green background with a wooden border and a filmstrip icon at the bottom left.

IMPORTANT

Quand vous désinstallez une application, il est possible que l'application n'existe plus (exemple sur iPhone sur diapositives suivantes).
